                                                                                                                                                                                Homo
    This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate lusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. ANV34277) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 28 novel genes and their fragments (nucleic acid sequences: AAN34264-V3325; amino acid sequences AAN31646-W325; awhich are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypucleotides, based on which tissues are described for each of the 28 polynucleotides. Specific uses are described for each of the 28 polynucleotides. Specific uses are described for each of the 28 polynucleotides. Specific uses are described for each of the 28 polynucleotides. Dased on which tissues they are most highly expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Human gene 25 encoded secreted protein HTEEB42, SEQ ID NO:76.

(first entry)

13-DEC-2002

AAE26983

AAE26983 standard; Protein; 298 AA

RESULT 2 **AAE**26983

AAD44636-AAD44676 represent cDNAs corresponding to 28 human secreted protein genes, and AAE26959-AAE26999 represent the proteins they encode. AAE27000-AAE27025 represent human secreted protein fragments or their variants. The secreted proteins and genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Specific uses are described for each of the 28 genes, based on the tissues in which they are most highly expressed and include developing products for the diagnosis or treatment of immunodeficiencies, e.g., X-linked agammaglobulinaemia, B cell immunodeficiencies, severe combined immunodeficiencies, autoimmune disorders e.g., systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, autoimmune thyroiditis, autoimmune haemolytic anaemia, Goodpasture's syndrome, Grave's disease, diabetes mellitus, dermatitis, inflammatory conditions Human; immunodeficiency; X-linked agammaglobulinaemia; septic shock; autoimmune disorder; rheumatoid arthritis; multiple sclerosis; cancer; Grave's disease; diabetes mellitus; hematopoietic disorder; stroke; respiratory disorder; asthma; allergy; gastrointestinal disorder; inflammatory bowel disease; heurodegenerative disorder; hepatitis; Parkinson's disease; Alzheimer's disease; cardiovascular disorder; atherosclerosis; myocarditis; renal disorder; fungicide; virucide; hyperproliferative disorder; acute glomerulonephritis; tonsilitis; respiratory disorder; rhinitis; sinusitis; neurological disease; endocrine disorder; hinitis; sinusitis; neurological disease; endocrine disorder; vulnerary; cytostatic; nootropic; cardiant; anti-HIV; tranquilliser; gout; antiparasitic. Novel human secreted polypeptides and polynucleotides for diagnosing, preventing, treating immune, hyperproliferative, cardiovascular, neurological, reproductive disorders and identifying modulators of therapeutic use Li Y, Zeng Z, Kyaw H, Fischer CL, Li I Wei Y, Moore PA, Young PE, Greene JM; 23..298 /note= "Human mature secreted protein" /label= Unknown /note= "Encoded by GWG" by TSC" 1..22 /label= Signal_peptide Location/Qualifiers Claim 11; Page 186; 209pp; English. /label= Unknown /note= "Encoded 11-MAY-2001; 2001US-0852659. 98US-0152060. for diagnosing, preventing, treating or ameliorating medical conditions and as food additives or preservatives New nucleic acid molecules encoding 28 human secreted proteins, useful

Claim 11; Page 186-187; 209pp; English.

AAD44854-AAD44984 represent CDNAs corresponding to 28 human secreted

Drotein genes, and AAE27097-AAE27137 represent the proteins they encode.

AEA27138-AAE27146 represent human secreted protein fragments. The genes

and their corresponding secreted proteins are useful for preventing,

treating or ameliorating medical conditions, e.g., by protein or gene

therapy. Secreted protein sequences of the invention are useful for the

diagnosis or treatment of disorders soft the invention are useful for the

chemmatoid arthritis), hyperproliferative disorders (e.g. neoplasms of

the breast or liver), cerebrovascular disorders (e.g. cerebral ischaemia,

angiogenesis), cardiovascular disorders (e.g. cardiac arrest), nervous

system disorders (e.g. Alzheimer's disease), infections caused by fungi,

bacteria and viruses and ocular disorders (e.g. corneal infection). The

prolypeptides can also be used to aid wound healing and epithelial cell

colypeptides can also be used to aid wound healing and epithelial cell

proliferation, to prevent skin aging due to sumburn, to maintain organs

to regenerate tissues and in chemotaxis. They can also be used as food

additives or preservative to increase or decrease storage capabilities,

fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors

and other nutritional components. The present sequence represents a human secreted protein of the invention,

```
The present invention relates to novel human secreted proteins

(ABR4763-ABR46145) and their coding sequences (ACC50344-ACC50856). The
proteins and their coding sequences are useful for the preparation of a
diagnostic or pharmaceutical composition for diagnosing or treating a
cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest,
coronary arteriosclerosis and myocardial ischemena), neural disorders,
immune system disorders, muscular disorders, reproductive disorders,
coronary contrestinal disorders, pulmonary disorders, renal disorders,
coronary contributes and/or cancerous diseases and conditions, for
proliferative disorders and/or cancerous diseases and conditions, for
cound healing and epithelial cell proliferation, to treat inflammation or
infection, for treating thrombosis and arteriosclerosis, for treating or
coronary arteriosclerosis such as Alzheimer's disease and Parkinson's
controllerative conditions such as Alzheimer's disease and Parkinson's
controllerative or bone and periodontal regeneration and aid in tissue
conditions are an expension of hammatopoietic cells and bone
marrow cells when used in combination with other cytokines, to maintain

WPI; 2003-310989/30 N-PSDB; ABX96990 New human secreted polypeptides and polynucleotides for diagnosing, prognosing, preventing and treating immune, hyperproliferative, liver, kidney, reproductive disorders and for identifying modulators of therapeutic use

Claim 11; Page 186; 209pp; English.

The invention relates to an isolated polypeptide comprising an amino acid gequence at least 95% identical to sequence of 28 human secreted form, proteins, their fragment, polypeptide domain, epitope, secreted form, correlated in ArCO 9721 and 97922. Also included are the encoding medical included in ArCO 9721 and 97922. Also included are the encoding nucleic acids, recombinant vectors, host cells, antibodies, and genes. Cr free proteins and nucleic acids are useful for diagnosing, preventing, crammodeficiencies, severe combined immunodeficiencies, severe combined immunodeficiencies, severe combined immunodeficiencies, severe combined immunodeficiencies, autoimmune thyroiditis, autoimmune haemolytic anaemia, industriates autoimmune thyroiditis, autoimmune haemolytic anaemia, disorders (e.g. systemic erythematosus, rheumatoid arthritis, multiple disorders (e.g. systemic erythematosus, rheumatoid arthritis, multiple coopparture's syndrome, Grave's disease, diabetes mellitus, dermatitis), heavadeopoietic disorders, inflammatory bowel disease, crohn's disease), capture in repertuain injury, inflammatory bowel disease, crohn's disease, complexity, central nervous system (CNS) disorders (e.g. septic abook, traumatic brain injury), neurodegenerative breast, cancers (e.g. gastric, ovarian, lung, bladder, liver and disorders (e.g. parkinson's disease and Alzheimer's disease, AlDS-related disorders (e.g. parkinson's disease and Alzheimer's disease, AlDS-related demenia, and prion disease), cardiovascular disease, and cardiopulmonary pancreatities, sarcoidosis, dermatitis, allogenic transplant rejection), hyperprofise, hyperprofices, e.g. edometria and disorders (e.g. edometria and disorders (e.g. edometria and disorders (e.g. edometria and disorde

Nucleic acids of the invention may be used for chromosome identification, chromosome mapping, in gene therapy, is identifying individuals from minute biological samples, as hybridisation probes, and as molecular weight markers. The present sequence represents a human secreted protein of the
              AB271190-AB271478 represent cDNAs corresponding to 178 human secreted protein genes, and ABP00011-ABP00299 represent the proteins they encode. AB271479-AB2714540 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening, and recombinant vectors and host cells comprising a nucleic acid of the invention. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliorating or preventing digestive disorders. Such conditions include disorders of the mouth, oesophagus, stomach, small intestine, large intestine, liver, biliary tract and pancreas, and include cancers of these organs and tissues. The secreted proteins and their nucleic acids may also be used in the

The present sequence represents a secreted protein. The polynucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating e.g. as vaccines) or suppressaing activity, hematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, chemotractic/chemokineic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cabherin/tumour invasion suppressor activity, anti-inflammatory activity, cabherin/tumour support in the specification to support these activities). The polynucleotide is also stated to be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

```
The sequence represents a human junctional adhesion molecule 2 (JAM2). The polynucleotide encoding the polypeptide is useful for recombinant production of JAM-2 protein, which in turn is useful for the production of antibodies. The antibodies may be used for probing cellular localisation and/or expression of JAM2 in tissues under normal and disease states, for immunoprecipitating JAM2 protein from cells and/or stroke tissues to determine whether it is modified by glycosylation and phosphorylation, and for determining JAM2 function. The antibodies inhibit interaction of JAM2 with inflammatory cells or influences their inflammatory diseases such as arthritis, asthma, rheumatory diseases such as arthritis, asthma, rheumatoid arthritis, inflammatory bowel disease and Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                         Novel nucleic acids encoding human junctional adhesion protein useful for producing antibodies that are suitable for therapeutic purposes

the invention relates to number secreted or transmembrate protein (1), the invention relates to number secreted or transmembrane protein (1), where the protein is substantially free from acid (cDNA) inserts (II), where the protein is substantially free from the internation proteins. (I) are useful for preventing, treating or confer ammanian proteins. (I) are useful for preventing to angiogenesis. (I) exhibits activity relating to angiogenesis, or crocked proliferation, cell differentiation, antiinflammatory, stem cell growth factor activity and activin or inhibin-related activities. (I) can be used to manipulate stem cells in culture to give activities. (I) can be used to manipulate stem cells in culture to give rise to neuroepithalial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or genetic disorders. (I) induces the proliferation of neural cells and cells that disorders (I) induces the proliferation of neuropathies, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic activity, regulation of haemacropotesis and is useful for treating myeloid or lassue repair, healing of burns, incisions, ulcers, or lasue growth and in tissue repair, healing of burns, incisions or certissue growth and in tissue repair, healing of burns, incision injury contraction and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SIDI), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis,
                                                                          Human; cytostatic; antirheumatic; antiarthritic; vulnerary; analgesic; antinflammatory; antibacterial; immunosuppressive; antiparkinsonian; neuroprotective; nootropic; osteopathic; haemostatic; vasotropic; antiulcer; fungicide; antidibatic; antiasthmatic; antiallergic; immunostimulan; antiparasitic; secreted protein; transmembrane protein; cytokine; cell proliferation; cell differentiation; autoimmune disease; stem cell; growth factor; nervous system disease; neuropathy; Alzheimer's disease; Parkinson's disease; Huntington's disease; osteoporosis; severe combined immunodeficiency; SCID; infection; multiple sclerosis; rheumatojid arthritis; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel secreted or transmembrane protein and polynucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human secreted or transmembrane protein (I),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 54; Page 116-117; 284pp; English.

This invention describes a movel PRO245 polypeptide (1), its agonist contrier or excipient), a novel PRO245 polypeptide (1), its agonist or antagonist, or their fragments, for modulating: (i) infiltration of inflammatory cells into tissue; (ii) an immune response; or (iii) T cell proliferation. The composition increases or decreases any of the effects (i) - (iii). The products of the invention have anti-inflammatory, continuorismus and anti-diabetic activity. (i), and its (ant)agonists anti-diabetic activity. (i), and its (ant)agonists and their fragments, are used to treat immune-related diseases. Continuorismus erythematosus, rheumatority, (i), and its (ant)agonists and their fragments, are used to treat immune-related diseases. Continuorismus erythematory wyopathies, systemic sclerosis (scleroderma), idiopathic inflammatory myopathies, quematomyositis, polymyositis, carthritis, spondyloarthropathies, quematomyositis, sarcoidosis, autoimmune continuoria, paroxysmal nocturnal hemolytic anemia (immune pancytopenia, paroxysmal nocturnal hemolytic anemia (immune pancytopenia), thyroiditis (drave's disease, Hashimoto's thyroiditis, juvenile lymphocytopenia (didopathic thrombocytopenia), thyroiditis, atrophic thyroiditis, juvenile lymphocytopenia, multiple sclerosis, didopathic demyelinating polyneuropathy, duillain-Barre syndrome, chronic chronic active hepatitis, primary biliary cirrhosis, granulomatous (hepatitis, and sclerosing cholangitis, inflammatory bowel disease controllis; crohn's disease), autoimmune or immune-mediated skin disease including whipple's disease. Autoimmune or immune-mediated skin disease sincluding asthma, allergic thinitis, and sidease, erythema multiforme, contact dermatitis, propersensitivity, and asthma, allergic thinitis, and endiated skin disease suchic demyeliale, proprio dermatitis, contact dermatitis, promenonia, allergic dermaticis, endicated service demonia, allergic demandentiale demonia, allergic demonia addinance contact dermatitis, andipopathic demonia and demonia allergic d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                urticaria, eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonitis, and transplantation associated diseases (graft rejection, and graft-versus-host-disease). (I), its (ant)agonists or fragment can also be used as an adjuvant in treatment of tumors. Antibodies against (I) can also be used for diagnosing such diseases. This sequence represents the human PRO245 protein described in the

AAY13344-403 represent secreted and transmembrane human proteins.

CC The CDNA sequences are obtained from CDNA libraries, prepared from
fetal lung, fetal kidney, fetal brain, fetal liver and fetal retina.

CC The encoded polypeptides have specific uses based on their homology to
The encoded polypeptides were specific uses based on their homology to
Known polypeptides, e.g. PRO211 and PRO217 can be used for disorders
associated with the preservation and maintenance of gastrointestinal
CC with the preservation and chronic mucosal lesions
uccess and congenital microvillus arrophy), skin diseases associated
CC ulceration and congenital microvillus arrophy), skin diseases associated
CC with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial
CC cancers such as lung squamous cell carcinoma of the vulva and gliomas),
CC potent effects on cell growth and development, diseases related to
CC growth or survival of nerve cells including Parkinson's disease,
CC Alzheimer's disease, ALS, neuropathies or cancer. PRO265 can be used as a target for anti-tumor drugs. PRO533 may be used in the treatment
CC of Usher Syndrome or Atrophia areata; PRO269 can be used as an anti-tumor capplications in wound healing and tissue repair; PRO317 can
CC therapeutic applications in wound healing and tissue repair; PRO317 can
CC vessels, or related tissue, e.g. in the heart of genital tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          178
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         238

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agoniets and antagonists are useful for treating and diagnosing immune related disorders. The disorders are cleated from systemic lupus erythematosus, rheumatoid arthritis, selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, Sjogren's systemic vasculitis, antoimmune haemolytic systemic vasculitis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, cutoimmune or immune-mediated skin diseases, allergic diseases, immunological diseases of the lung, and transplantation associated diseases including graft rejection and graft-versus-host-disease.

Communological diseases of the lung, and transplantation probes used the isolation of human PRO sequences. AACS8579 to AACS8737 represent human PRO sequences. AACS8579 to AACS8579 to AACS8570 and protein sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  178

useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenicidisorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24388 to AAB2445s represent nucleocide and protein sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                         Gerber H, Hillan KJ, Goddard A;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                            The present sequence represents a secreted protein. The polymucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating activity, issue avacines) or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activiny, haematopoiesis regulating chemotactic/chemokinetic activity, activiny, hamboly activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity (no data is given in the specification to support these activities). The polymucleotide is also stated to be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FKNRAEMIDFNIRIKNVTRSDAGKYRCEVSAPSEQGQNLEEDTVTLEVLVAPAVPSCEVP 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence represents a human junctional adhesion molecule 2 (JAM2). The polymucleotide encoding the polypeptide is useful for recombinant production of JAM-2 protein, which in turn is useful for the production of antibodies may be used for probing cellular localisation and/or expression of JAM2 in tissues under normal and disease states, for immunoprecipitating JAM2 protein from cells and/or stroke tissues to determine whether it is modified by glycosylation and phosphorylation, and for deermining JAM2 function. The antibodies inhibit interaction of JAM2 with inflammatory cells or influences their paracellular migration, and is therefore useful for alleviating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inflammatory diseases such as arthritis, asthma, rheumatoid arthritis,
inflammatory bowel disease and Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            23 YHKAYGFSAPKDQQVVTAVEYQEAILACKTPKKTVSSRLEWKKLGRSVSFVYYQQTLQGD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human secreted or transmembrane protein (1), their fragments and is encoded by specific complementary deoxyribonucleic caid (CDNA) inserts (II), where the protein is substantially free from acid (CDNA) inserts (II), where the protein is substantially free from cother mammalian proteins. (I) are useful for preventing, treatment or prevention of tumours. (I) exhibits activity relating to angiogenesis, cytokine, cell proliferation, cell differentiation, antiinflammatory, stem cell growth factor activity and activin or inhibin-related activities. (I) can be used to manipulate stem cells in culture to give crise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or crise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or central and peripheral nervous system diseases and neuropathies, such as creating and peripheral nervous system diseases and neuropathies, contral and peripheral nervous system diseases and neuropathies, cut activity, regulation of hamentopoiesis and is useful for treating myeloid cell disorders, platelet disorders such as thrombocytopaenia con and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth and in tissue repair, healing of burns, incisions, uccertion or treating osteoporosis, osteoarthritis, bone degeneration and treatment of lung or liver fibrosis, repertuation of peripheral disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis,
                                                                                                                      protein;
Human; cytostatic; antirheumatic; antiarthritic; vulnerary; analgesic; antiinflammatory; antibacterial; immunosuppressive; antiparkinsonian; neuroprotective; nootropic; osteopathic; haemostatic; vasotropic; antiulcer; fungicide; antidabetic; antiasthmatic; antiallergic; immunostimulant; antiparastitic; secreted protein; transmembrane protein; cytokine; cell proliferation; cell differentiation; autoimmune disease; setm cell; growth factor; nervous system disease; neuropathy; attentiation; adisease; Parkinson's disease; Huntington's disease; osteoporosis; severe combined immunodeficiency; SCID; infection; multiple sclerosis; rheumatoid arthritis; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel secreted or transmembrane protein and polynucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Evans C;

                                                                                                                                                                                                                                                                  ö
                                                                                                           The invention comprises the DNA and protein sequences of the extracellular region of human junctional adhesion molecules (huJAM). The extracellular huJAM DNA and protein sequences are useful in the treatment of: immune system disorders (e.g. immune deficiency); autoimmune disorders; inflammatory disorders; cancer; wound healing; or a cardiovascular disease. The present amino acid sequence represents the full-length membrane-bound huJAM2 protein.

```
This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAV34277) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 28 novel genes and their fragments (nucleic acid sequences: AAV34286-V34325; amino acid sequences AAV5196-W7535) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 28 polymucleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TVSKLDTGEYSCEARNSVGYRRCPGKRMQVDDLNISGIIAAVVVVALVISVCGLGVCYAQ

therapy. Specific uses are described for each of the 28 genes, based on the tissues in which they are most highly expressed and include developing products for the diagnosis or treatment of immunodeficiencies, e.g., X-linked agammaglobulinaemia, B cell immunodeficiencies, severe combined immunodeficiencies, autoimmune disorders e.g., systemic lupus expthematosus, rheumatoid arthritis, multiple sclerosis, autoimmune the products for the diabetes menlitus, dermatitis, inflammatory conditions thyroiditis, autoimmune haemolytic anaemia, Goodpasture's syndrome, Grave's disease, diabetes menlitus, dermatitis, inflammatory conditions including septic shock, sepsis, reperfusion injury, inflammatory bowel disease, haemacopoietic disorders, respiratory disorders e.g., asthma and allergy, gastrointestinal disorders e.g., inflammatory bowel disease), cancers e.g., gastric, ovarian, lung, inflammatory bowel disease), cancers e.g., gastric, ovarian, lung, inflammatory bowel disease, neurodegenerative disorders e.g., ischaemic brain injury and/or stroke, neurodegenerative disorders e.g., canten neurodegenerative disorders e.g., schinson's disease, cardiovascular disorders e.g., myocarditis, arrhythmias, atherosclerosis, inflammatory disorders e.g., myocarditis, arrhythmias, atherosclerosis, inflammatory disorders e.g., myocarditis, arrhythmias, carded disorder (thrombosis, arterial thrombosis, atherosclerosis), hyperpoinferative disorders, respiratory disorders, permanative disorders, permanative disorders, respiratory disorders, permanative disorders, inflammatory disorders, permanative disorders, inflammatory disorders, permanative disorders, respiratory disorders, permanative disorders, allergic disorders, permanative disorders, respiratory disorders, permanative disorders, allergic disorders, allergic disorders, permanative disorders, allergic disorders, allergic disorders, allergic disorders, allergic disorders, allergic disorders, and the invention, care general respiratory, and represents and reproductive system disord

```
AAD44636-AAD44676 represent cDNAs corresponding to 28 human secreted protein genes, and AAE26959-AAE26999 represent the proteins they encode. AAE27000-AAE27025 represent human secreted protein fragments or their variants. The secreted proteins and genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene
                                                                                                                                                                                                                                                                                                                                        Claim 11; Page 186; 209pp; English.
                                                                                                                                                                                                                          (ROSE/)

```
AAD44854-AAD44984 represent CDNAs corresponding to 28 human secreted

Drotein genes, and AAE27097-AAE27137 represent the proteins they encode.

AAE27138-AAE27144 represent human secreted protein fragments. The genes
and their corresponding secreted proteins are useful for preventing,
treating or ameliorating medical conditions, e.g., by protein or gene
creating or ameliorating medical conditions, e.g., by protein or gene
creating or ameliorating medical solding, e.g., by protein or gene
chargy. Secreted protein sequences of the invention are useful for the
diagnosis or treatment of disorders such as autoimmune diseases (e.g.
therapy. Secreted protein sequences of the invention are useful for the
diagnosis or treatment of disorders (e.g. cerebral ischaemia,
crheumatoid archiris), hyperproliferative (e.g. cerebral ischaemia,
crheumatoid archiris), hyperproliferative (e.g. cerebral ischaemia,
candidenesis, candiso be used to aid wound healing and epithelial cell
proliferation, to prevent skin aging due to sunburn, to maintain organs
before transplantation, for supporting cell culture of primary tissues,
corrected tissues and in chemotaxis. They can also be used as food
additives or preservative to increase or decrease storage capabilities,
fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors
and other nutritional components. The present sequence represents a human
creaments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel human secreted proteins (ABR47633-ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, arcentaged received and myocardial ischaemia), neural disorders, immune system disorders, muscular disorders, reproductive disorders, gastrointestinal disorders, upulmonary disorders, renal disorders, proliferative disorders and/or cancerous diseases and conditions, for

JS2002172994-A1

21-NOV-2002.

The invention relates to an isolated polypeptide comprising an amino acid sequence at least 95% identical to sequence of 28 human secreted concerts sequence at least 95% identical to sequence of 28 human secreted form, comproteins, their fragment, polypeptide domain, epitope, secreted form, variant, allelic variant, or species homologue, or the encoding concluded in ATCC 97921 and 97922. Also included are the encoding concluded in ATCC 97921 and 97922. Also included an encoding concluded acids, recombinant vectors, host cells, antibodies, and genes. The proteins and nucleic acids are useful for diagnosing, preventing, concluded in ATCC 97921 and 97922. Also included acids and genes. The proteins and nucleic acids are useful for diagnosing, preventing, prognosing or ameliorating a medical condition e.g. The proteins and nucleic acids. Severe combined immunodeficiencies (e.g. X-linked agammaglobulinaemia, B cell immunodeficiencies (e.g. X-linked agammaglobulinaemia, B cell immunodeficiencies, severe combined immunodeficiencies), accompances, severe combined immunodeficiencies, severe combined immunodeficiencies, multiple disorders, capacies, disorders, disorders, conditions (e.g. septic shock, capacies, cancers (e.g. gastric, ovarian, lung, bladder, liver and cinjury and/or stroke, traumatic brain injury), neurodegenerative complications), inflammation (e.g. hepatitis, gott, traumatic disease and Alzheimer's disease, AlbS-related disorders (e.g. parkinson's disease and Alzheimer's disease, bypass complications), inflammation (e.g. hepatitis, gott, traumatic, blood-related disorders (e.g. hepatitis, gott, traumatic, blood-related disorders, renal disorders (e.g. acute complexative disorders, renal disorders (e.g. acute complexity hyperpiliterative disorders, renal disorders (e.g. acute complexity hyperpiliterative disorders, renal disorders (e.g. acute complexity). Hyperpiliterative disorders, renal disorders (e.g. acute complexity) hyperpiliterative disorders, renal disorders (e.g. acute complexity). Hyperpiliter New human secreted polypeptides and polynucleotides for diagnosing, prognosing, preventing and treating immune, hyperproliferative, liver, kidney, reproductive disorders and for identifying modulators of Claim 11; Page 186; 209pp; English. therapeutic use -

reproductive system disorders (e.g. endometriosis), infectious diseases, and pancreatic disorders. Many other diseases and disorders are listed in the specification. They also useful as avactine adjuvant. Further they are useful to enhance or inhibit complement mediated cell lysis, for stimulating wound and tissue repair, angiogenesis, and the repair of stimulating wound and tissue repair, angiogenesis, and the repair of pascular or lymphatic diseases or disorders. They are also useful to prevent hair loss, to modulate mammalian characteristics such as body height, weight, hair colour, and to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors or other nutritional components. The proteins are represents a secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                     142

AB271190-AB271478 represent CDNAs corresponding to 178 human secreted protein genes, and ABP00011-ABP00299 represent the proteins they encode. DECTATA AB2714740 represent human secreted protein genomic fragments. The cinvention also encompasses antibodies specific for the secreted proteins, convectors and host cells comprising a nucleic acid of the invention. The secreted proteins, and recombinant convectors and host cells comprising a nucleic acid of the invention. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliorating or preventing digestive disorders. Such conditions include disorders of the mouth, coepophagus, stomach, small intestine, large intestine, large intestine, large them mouth, coepophagus, stomach, small intestine, large intestine, large intestine, large intestine, coepophagus, and include cancers of these organs and tissues. The secreted proteins and their nucleic acids may also be used in the creatment of immune disorders, inflammation, infection, of the invention may be used for chromosome identification, chromosome mapping, in gene therapy, for identifying individuals from minute construction, anxiets. The present sequence represents a human secreted protein of the converted protein of the converted protein of the converted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 FKNRAEMIDFNIRIKNVTRSDAGKYRCEVSAPSEQGQNLEEDTVTLEVLVAPAVPSCEVP 120

The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, foremsics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.

Human PRO245 protein.

```
This invention describes a novel composition containing (apart from a carrier or excipient), a novel PRO245 polypeptide (1), its agonist or antagonist, or their fargements, for modulating: (i) infiltration of antagonist, or their fargements, for modulating: (i) infiltration of inflammatory cells into tissue; (ii) an immune response; or (iii) T cell proliferation. The composition increases or decreases any of the effects (c) [iii]. The products of the invention have anti-inflammatory.

CC in: (iii). The products of the invention have anti-inflammatory.

CC anti-autoimmune and anti-diabetic activity. (I), and its (ant) agonists anti-inflammatory are used to treat immune-related diseases.

CC particularly T cell-mediated diseases. The diseases treated include systemic upon systemic solerosis (scleroderma).

CC particularly T cell-mediated diseases. The diseases treated include stratis, spondyloarthropathics ystemic vasculitis, autoimmune compactive incommune compactive systemic vasculitis, autoimmune compactive systemic vasculitis, autoimmune compactive in autoimmune compactive in autoimmune compactive paraphic thrombocytopenia, paroxysmal nocturnal compactive and paraphic inflammatory demyelinating polymeuropathy, (idiopathic thrombocytopenia), thyroiditis, atrophic compactive hepatitis, invenile lumphersemential sclerosis, diopathic demyelinating polymeuropathy, dillain.Barre syndrome, chronic active hepatitis, primary bilary cirrhosis, granulomatous chronic active hepatitis, primary bilary cirrhosis, granulomatous contact dermatitis, and sclerosing cholangitis, inflammatory bowel disease colling: Crobin's disease), allopathic uninemented or whipple's disease, arythema multiforme, contact dermatitis, producing contact dermatitis, producing contact dermatitis, primary bilary contact dermatitis, producing contact dermatitis, primary bilary contact dermatitis, primary bilary contact dermatitis, primary bilary contact dermatitis, primary bilary contact dermatitis, antoimmune contact dermatitis, and sclerosing chorac
                                       inflammatory myopathy; hemolytic anemia; thrombocytopenia; thyroiditis; dabetes mellitus; demyelinating polyneuropathy; Gulliain-Barre syndrome; multiple sclerosis; polyneuropathy; hepatitis; cirrhosis; enteropathy; sclerosing cholangitis; inflammatory bowel disease; Whipple's disease; sthindisease; dermattis; psoriasis; asthma; allergic rhinitis; tumor; food hypersensitivity; urricaria; eosinophilic pneumonia; transplant; idiopathic pulmonary fibrosis; graft rejection; PRO245; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   urticaria, eosinophilic pheumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonitis, and transplantation associated diseases (graft rejection, and graft versue-host-disease). (I), its (ant) agonists or fragment can also be used as an adjuvant in treatment of tumors. Antibodies against (I) can also be used for diagnosing such diseases. This sequence represents the human PRO245 protein described in the
cell-mediated disease; spondyloarthromathy; sclerosis; renal disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Composition containing novel polypeptide PRO245, its agonist

ŏ New isolated human genes and polypeptides used in, e.g. treatment gastrointestinal ulceration

Claim 12; Fig 24; 320pp; English

AAY13344-403 represent secreted and transmembrane human proteins.
The cDNA sequences are obtained from cDNA libraries, prepared from fetal lung, fetal kidney, fetal brain, fetal liver and fetal retina.
The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease, as

   PRO264 can be used
                              as a target for anti-tumor drugs. PRO533 may be used in the treatment of Usher Syndrome or Atrophia areata; PRO269 can be used as an anti-thrombotic agent; PRO287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract.

Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus

Claim 33; Fig 16; 309pp; English

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, costeoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Syogren's systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases of inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune con immune-mediated skin diseases, allergic diseases, immunological diseases of the lung, and transplantation associated diseases including graft rejection and graft-versus-host-disease. AAC58379 to AAC5879 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAC58579 to AAC5842 and AAB33414 to AAB33477 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.

; Patent No. 6358707
; GENERAL INFORMATION:
; APPLICANT: SmithKline Beecham Corporation
; TITLE OF INVENTION: Human F11 Antigen: A Cell Surface
; TITLE OF INVENTION: Receptor Involved in Platelet Aggregation
; TITLE REFERENCE: GH-70150US
; CURRENT APPLICATION NUMBER: US/09/462,270
; PRIOR PILING DATE: 2000-01-05
; PRIOR APPLICATION NUMBER: 60/052,186
; PRIOR RILING DATE: 1997-07-10
; NUMBER OF SEQ ID NOS: 4
; SOFTWARE: FastSEQ for Windows Version 3.0
